

# Advanced Measuring Systems for Optimized Machining

New Rotating Dynamometer Type 9170A...

Analysis of mechanical loading of the tool cutting is very important in achieving integrated optimization of cutting processes. Piezoelectric dynamometers from Kistler provide reliable information about the level of forces and torques involved. Precise, highly responsive recording of these signals allows targeted improvement of all of the

parameters involved in the process. Advanced Kistler measuring systems permit cost-effective machining of difficult-to-machine materials.

**Optimized manufacturing processes involving turning, milling, drilling, tapping and grinding. With Kistler.**
